

Collective Innovation to Fight Climate Change

April 2022 | Newsletter #3

Welcome to Newsletter #3 of EU Erasmus+ project Collective Innovation to Fight Climate Change (Fight Climate Change).

Our project will develop a set of tools that will educate educators on the topic of climate change.

It will also upskill entrepreneurs and SMEs on how to use the innovation management process in developing their sustainability strategies to contribute to the fight against climate change, and guide them on becoming agents of change for their colleagues and employees.

Follow us on social media to stay updated on our exciting project!

The FCC Project Consortium have recently held our first training course in Brussels, aimed at educators from around Europe. We have also been planning the next outputs of our project, and meeting regularly to discuss how our project can make a lasting sustainable impact.

The third edition of our newsletter will share what happened at our training course, discuss our project partners meeting, give updates on our consortium members' activities and summarise our recent news posts.

Brussels training course

23 individuals with a keen interest in the environment and education joined us in Brussels in March for five days of training. A variety of topics were looked at such as climate financing, the UN's Sustainable Goals and COP26.

The course involved presentations by experts, group work activities and interactive games, as well as the chance for participants to give presentations on their work regarding sustainability.

The participants also enjoyed a trip to Circularium, a former industrial space that has been transformed into an area for local innovation, and a dinner with all involved in the project at a sustainable restaurant.

To see more from our week in Brussels, visit our dedicated webpage [here](#) .

Consortium meeting

Our project partners met in person for the first time since September. Representatives of all seven consortium members were in attendance for the meeting at CreaD's headquarters in Brussels.

We discussed the previously mentioned training course, the progress we are making with various project outputs and the project's exciting future developments.

Project partner activities

Our project consortium members are very active in the fight against climate change. Below is a brief summary of some of the activities we have been involved in recently:

CEED are involved in a newly launched Erasmus+ project called GreenVETnet that aims to further mainstream the integration of sustainability aspects in vocational education and training. This will be achieved by establishing a methodology for educators' skills training that support sustainable development. Find out more [here](#) .

WORLDVIEW IMPACT FOUNDATION

Worldview Impact founder Bremley Lyngdoh has been working in Slovakia on a forestry project that aims to restore mountain ecosystems as well as revive alpine trees and forest wildlife. He also aims to explore ways in which jobs in ecosystem restoration can be created for Ukrainian refugees to reduce their trauma from the war. Find out more [here](#) .

Creative District and IDEC form part of the INPAD project, an Erasmus+ programme that aims to test the design and practice of an innovative methodology for participatory design in and around schools. The project will involve students, teachers and communities in the process of making schools more enjoyable and eco-friendly places to be. Find out more [here](#) .

IASP's 2022 world conference will focus on green and digital change, giving a voice to knowledgeable individuals and innovative companies who are experienced in green issues. It will be held in Seville, Spain this September. Find out more [here](#) .

IASP have also been involved in the project HIDS that aims to create Brazil's International Hub for Sustainable Development. The area has a big focus on health, education and the environment. Find out more [here](#) .

News updates

IPCC release warning with concerning climate report

Earlier this year the IPCC released their Climate Change report which warned that without concrete action, global heating will continue to worsen. This could lead to serious effects on people and ecosystems.

Are electric vehicles the future of transport?

We all know electric vehicles are expensive, but issues with them go much further than just the price. Despite this, traditional fuel powered vehicles won't be allowed in many nations beyond 2040.
